TITLE OF INVENTION: METHOD AND X-RAY APPARATUS FOR OPTIMALLY IMAGING ANATOMICAL PARTS OF THE HUMAN ANATOMY

APPLN. TYPE	SMALL ENTITY	ISSUE FEE DUE	PUBLICATION FEE DUE	PREV. PAID ISSUE FEE	TOTAL FEE(S) DUE	DATE DUE
nonprovisional	NO	\$1440	\$300	\$0	\$1740	05/06/2008

**THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED.** THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

**THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

**IMPORTANT REMINDER:** Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

# PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: **Mail**

**Mail Stop ISSUE FEE

## Determination of Patent Term Adjustment under 35 U.S.C. 154 (b) (application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 1099 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 1099 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (<http://pair.uspto.gov>).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

**ATTACHMENT TO NOTICE OF ALLOWABILITY**

***Allowable Subject Matter***

Claims 1-14 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to Claim 1, the prior art of record teaches many of the elements of the claimed invention, including a method for imaging a plurality of individual anatomical parts of the human anatomy by means of an x-ray apparatus, the method comprising the steps of: acquiring at least one initial projection image of at least a region of interest of the human anatomy and retaining acquisition settings for the at least one initial projection image; determining positions and/or orientations for each of the plurality of individual anatomical parts in the region of interest from the at least one initial projection image; determining optimum imaging parameters for each of the plurality of individual anatomical parts from their determined positions and/or orientations and the retained image acquisition settings for the at least one initial image, wherein the optimum imaging parameters include one or more settings of projection line position, projection line direction, collimation and exposure; and acquiring images for each of the plurality of individual anatomical parts using the optimum imaging parameters.

However, prior art fails to teach or fairly suggest the method wherein the optimum imaging parameters are locally adapted for each of the plurality of individual anatomical parts, and that said locally adapted optimum imaging parameters are dynamically used to acquire said projection images for each of said plurality of anatomical parts, in the manner required by Claim 1.

With respect to Claim 9, an x-ray apparatus for imaging a plurality of anatomical parts of the human anatomy of a patient, in particular, parts of the human spine, having an x-ray source and an x-ray detector facing the x-ray source, the x-ray source and the x-ray detector being movable with respect to each other and with respect to the patient so as to enable the acquisition of projection images of each of the plurality of anatomical parts from different positions and/or orientations, the x-ray apparatus comprising: a control unit for controlling the x-ray apparatus to acquire at least one initial projection image of at least a region of interest in the human anatomy and to retain acquisition settings for the at least one initial projection image; and, a processing unit for determining the position and/or orientation of individual anatomical parts in the region of interest from the at least one initial projection image and for determining optimum imaging parameters for the plurality of individual anatomical parts from the determined positions and/or orientations of individual anatomical parts and the retained acquisition settings for the at least one initial projection image, wherein the optimum imaging parameters include one or more settings of projection line position, projection line direction, collimation and exposure, the control unit further for controlling the x-ray apparatus to acquire projection images of the individual anatomical parts using said optimum imaging parameters.

However, prior art fails to teach or fairly suggest the apparatus wherein the optimum imaging parameters are locally adapted for each of the plurality of individual anatomical parts, and that said locally adapted optimum imaging parameters are

dynamically used to acquire said projection images for each of said plurality of anatomical parts, in the manner required by Claim 9.

With respect to Claim 10, the prior art of record teaches many of the elements of the claimed invention, including a method for imaging the human spine, comprising the steps of: acquiring at least one initial projection image of at least a region of interest of the spine and retaining acquisition settings for the at least one initial projection image; determining positions and/or orientations for each vertebrae in the region of interest from the at least one initial projection image, the positions and/or orientations including a spinal axis line and a tilt angle per vertebrae; determining optimum imaging parameters for each of the vertebrae from their determined positions and/or orientations and the retained image acquisition settings for the at least one initial image, wherein the optimum imaging parameters include one or more settings of projection line position, projection line direction, collimation and exposure; and acquiring images for each of the vertebrae using the optimum imaging parameters.

However, prior art fails to teach or fairly suggest the method wherein the optimum imaging parameters are locally adapted for each of the vertebrae, and that said locally adapted optimum imaging parameters are dynamically used to acquire said projection images for each of said vertebrae, in the manner required by Claim 1.

Claims 2-8 and 11-14 are allowed by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: U.S. Patent to Vaillant et al. (US 6,320,928 B1) teaches a method and apparatus for imaging individual anatomical portions of a human anatomy and optimizing imaging parameters based on an initial scan of said region, but do not teach that optimum imaging parameters are locally adapted for each of the plurality of individual anatomical parts, and that said locally adapted optimum imaging parameters are dynamically used to acquire said projection images for each of said plurality of anatomical parts; and Eberhard et al. (US 4,942,596) and Hsieh (US 5,696,807) teach methods of locating object boundaries and adjusting parameters for scanning said boundaries, but do not teach that optimum imaging parameters are locally adapted for each of the plurality of individual anatomical parts, and that said locally adapted optimum imaging parameters are dynamically used to acquire said projection images for each of said plurality of anatomical parts.
